

How to finish the 10.13, 10.14 installation.

1. Use **EasyMBR-Installer1013** to make **MBR Installer**.
Install Clover, and setup Clover as `BooterConfig=0x28, CsrActiveConfig=0x67`
2. Boot to **MBR Installer**, open **Utilities** -> **Disk Utility**, format as MBR HFS+.
Install High Sierra, Mojave to blank MBR HFS+ "**Target**" partition.
3. Boot to "**Target**" MBR HFS+ partition, setup user name and login, finish the installation.
4. If your CPU didn't support SSE4.2 like as LGA775 Core 2 Duo E8400,
and **always get 10.14 Mojave reboot** during booting "**Target**" system after installation.
You need to patch [com.apple.telemetry](#) first as below.

Boot to **MBR Installer**, open **Utilities** -> **Terminal**, run the script command:
mojave2core

Please read "Work on 10.13 10.14.txt" for the details if you need it.
